

A.4.7 SWMU 32

The PCB waste storage area (SWMU 32) is located within the TBA Warehouse, which is a large building (approximately 75 feet wide by 300 feet long) historically used to store various products including tires and batteries and occasionally for temporary waste storage. The PCB waste storage area occupies a very small portion of the northwestern end of the warehouse. This area is used to store oil generated during the cleaning of transformers and similar wastes such as ballast boxes from old lighting fixtures. No action is required according to Module III of the HSWA permit.
